SUMMARY

Data scientist working on forecasting and experimentation. I care about models that survive contact with production.

EXPERIENCE

Senior Data Scientist, Lumen Grid

San Francisco · Apr 2021 – Present

- Built the demand forecasting model now used for 92% of grid capacity planning, improving mean absolute error by 19% over the prior baseline.
- Designed the experimentation framework that standardised 60+ A/B tests a year across four product teams.
- Shipped an anomaly detector that catches meter faults a median of 6 days earlier than the previous rules engine.

Data Scientist, Beacon Retail Group

Seattle · Jul 2018 – Mar 2021

- Developed a markdown optimisation model that lifted end-of-season margin by 4.2 percentage points across 380 stores.
- Replaced a spreadsheet forecasting process with a Python pipeline, cutting the monthly planning cycle from 5 days to 1.

EDUCATION

MS Statistics, University of Washington

2016 – 2018

BS Mathematics, UC San Diego

2012 – 2016

SKILLS

Python · R · SQL · PyTorch · dbt · Airflow · Causal inference · Bayesian methods
